PROFILE SUMMARY

B.Tech CSE graduate with hands-on experience in Python, Machine Learning, Data Analytics, and AWS. Skilled in building predictive models, developing REST APIs, and deploying ML solutions on cloud platforms. Strong in data preprocessing, visualization, and statistical analysis to drive data-driven decision-making.

EDUCATION

Bachelor of Engineering(B-Tech CSE), Galgotias University	2021-2025
Intermediate Kanha Makhan Public School, Mathura	May 2020
High School Army Public School, Mathura	May 2018

TECHNICAL SKILLS

- **Deep Learning**: PyTorch, TensorFlow, Keras, HuggingFace
- **NLP/LLMs**: Transformers, BERT, GPT, LangChain
- **Data Science/ML**: Scikit-learn, Pandas, NumPy, OpenCV
- **Deployment**: FastAPI, Streamlit, Docker, AWS Sagemaker
- **MLOps**: MLflow, DVC, Airflow, CloudWatch
- **Programming**: Python, SQL (Primary), C/C++
- **Visualization**: Matplotlib, Seaborn
- **Supporting**: Power BI, Postman, MongoDB

COURSES & CERTIFICATIONS

- HackerRank Problem Solving (Basic & Intermediate)
- HackerRank Python (Basic)
- HackerRank Rest API (Intermediate)
- AWS Academy Graduate - AWS Academy Cloud Foundations

INTERNSHIPS

Your Notebook
Data Analytics Intern

- Analyzed sales and customer data to identify key purchase trends and insights.
- Created reports and dashboards using Excel/Python to support business decisions.
- Assisted in digital marketing by tracking campaign performance and preparing engagement reports.
- Conducted competitor research to suggest strategies for business growth.
- Gained hands-on experience in a fast-moving startup environment, collaborating with a small team across multiple functions.

PROJECTS

Voice Assistant | (Python, NLP, Task Automation, SpeechRecognition)
https://github.com/sumitdwivedi0640/myvoiceassistant

- I created a Python voice assistant capable of understanding and responding to user commands in realtime.
- Using speech recognition, natural language processing, and task automation, the assistant can perform various tasks like setting reminders, sending emails, and controlling smart devices.
- The project demonstrates my expertise in developing intelligent voice- enabled applications and showcases my skills in speech recognition and NLP

Image Forgery Detection | (Python, ML, Computer Vision, Data Preprocessing, OpenCV)
https://github.com/sumitdwivedi0640/Image-Forgery-Detection

- Developed a machine learning model to detect image forgeries by analyzing inconsistencies in image properties like lighting, shadows, textures, and JPEG artifacts.
- Trained and evaluated the model on a diverse dataset to accurately identify various types of forgeries, achieving high detection precision and contributing to digital image authenticity.
